(954) 415 5766

Aurora, CO

<https://www.linkedin.com/in/taylorpoe>

An experienced software developer and natural problem solver with a diverse, language-agnostic skill set spanning Python, Java, TypeScript, HTML, CSS, JavaScript, C#, and Go. Thrives in fast-paced, collaborative environments, working effectively with developers, systems analysts, architects, and business stakeholders to translate complex requirements into practical solutions. Skilled at identifying root causes of issues and troubleshooting complex problems, with a strong commitment to code quality and continuous improvement. Experienced with Agile delivery practices, Git version control, and Microsoft Azure DevOps for sprint/story tracking, deployments, and container monitoring. Values clear communication, mentorship, and a continual desire to learn new technologies.

Professional Experience

Software Technical Lead - Gaea Global Technologies

July 2022- Present

Santa Clara, California (Remote)

- Backend and Integration Software development consultant for Meta Platforms Inc., integrating data between 3rd party endpoints and Meta proprietary systems including Oracle Primavera P6, Oracle Unifier, SharePoint, and Google Drive to increase project data visibility for project owners and director-level decision makers.
- Owns data pipeline architecture for Synkrato, a warehouse modeling platform performing inventory slotting optimization and digital twin modeling, ingesting third-party data (sales history, inventory levels, warehouse location data, and purchase orders) via SFTP/XML and REST APIs on a daily cadence across multiple customer integrations.
- Leads onboarding for prospective clients during trial periods, eliciting business requirements and building out custom data pipelines, modules, and forms to support an effective evaluation experience before full adoption.
- Supports a highly modular, configurable application architecture, enabling bespoke or out-of-the-box modules per customer, including external service integrations for form autocomplete and data POSTs to third-party systems.
- Develops a multi-tenant MEAN stack (MongoDB, Express.js, Angular, Node.js) application with Dockerized microservices deployed across dev, demo, QA, and production environments, collaborating with a distributed team across the US, Europe, and India.
- Manages Agile delivery using Azure DevOps for sprint/task tracking and deployment configuration, branch-specific CI/CD pipelines, and Git for source control.
- Leads code review processes, delegates tasks, and mentors subordinates, establishing training initiatives that helped triple the team's developer headcount and accelerated new-hire ramp-up time.

Software Developer - Gaea Global Technologies

October 2019 - July 2022

Santa Clara, California (Remote)

- Software development consultant for Meta Platforms Inc., adhering to Test-Driven Development (TDD) principles to build and deploy cron-scheduled integrations supporting Meta's P6 and Unifier initiatives, in compliance with Meta's stringent code quality and security standards.
- Developed a supply chain warehouse solution using the MEAN stack (MongoDB, Express.js, Angular, Node.js), collaborated with a distributed team of developers across the US, Europe, and India.
- Built REST web service integrations triggered by customer ERP systems to handle versioning, configuration, and printing of warehouse shipping labels for major fulfillment customers including Zebra Technologies and Munchkin (Baby Products).
- Designed and developed an Angular-based UI to visualize shipment tracking data, working alongside Golang chaincode developed for Oracle Hyperledger Fabric blockchain proof-of-concept demos to prospective Oracle consulting clients.
- Wrote unit tests for both legacy and new functionality using Mocha and Chai, supporting long-term code reliability.
- Helped break apart a monolithic application into Dockerized microservices, applying separation-of-concerns principles across pods and services.
- Built a configurable ZPL parsing library using complex regular expressions to dynamically add/remove print commands as middleware in the label generation pipeline.
- Traveled to Bangalore, India for a 3-week on-site training and team integration assignment.

Junior Web Application Developer - Doitall LLC/StateVitalRecords

January 2019 - October 2019

Palm Beach Gardens, Florida

- Developed full-stack features on a Laravel (PHP) and Vue.js frontend with MySQL, using the MAMP stack, applying OOP and MVC best practices to enhance and extend a legacy codebase.
- Built and maintained payment and form-based application flows supporting tens of thousands of users requesting official state documents (birth/death certificates), integrating online forms with payment processing via external APIs.
- Collaborated within a small development team using Git for version control, participating in sprint planning and task estimation.
- Translated project specifications and change requests from stakeholders into functional application updates, building early experience eliciting requirements from non-technical business owners.
- Extended the platform to new state markets by implementing additional state-specific websites, increasing the service's reach and user base.

Projects

Personal Portfolio - poegrammar.com

November 2025

- Built and deployed a personal portfolio site using Knockout.js and Java Spring Boot, hosted on GitHub Pages with a separate staging environment (test.poegrammar.com) on Netlify

Fitness Tracker (in active development) - fit.poegrammar.com

April 2026

- Building a full-stack fitness tracking app using .NET Core 10 Web API (C#) and React, backed by PostgreSQL, self-hosted on a home Ubuntu Server via Dockerized containers with a webhook-based CI/CD pipeline and isolated test/production environments
- Features include per-exercise progress charts, set/rep/weight logging, days-since tracking, and a quick-reference dashboard

Education

Palm Beach Atlantic University - B.S., Computer Science

August 2016 - May 2019

West Palm Beach, Florida

Skills

- **Languages:** Python, Java, TypeScript, JavaScript, SQL, MySQL, Go, PHP, CSS, C#, HTML
- **Frameworks/Tools:** ASP.NET Core MVC, Node.js, Express.js, Vue.js, Knockout.js, Spring Boot, Oracle P6 Primavera, Oracle Unifier, Docker, Elasticsearch, MongoDB, Hyperledger Fabric, AWS Sagemaker, SoapUI, Git, Azure DevOps, Linux Server CLI, VS Code
